ABDUL MATEEN KHAN

Software Engineer | Full-Stack Development

+92-342-6345451 | Mateen.abdul223@gmail.com | LinkedIn | Peshawar, Pakistan

SUMMARY

Final-year Software Engineering student seeking a Software Engineer Position, with hands-on experience building full-stack web applications using Python, Flask, React, and SQL databases. Strong foundation in data structures and algorithms, object-oriented programming, REST API design, and relational database modeling, backed by coursework in software engineering, quality assurance, and operating systems. Comfortable working with Git-based workflows, writing clean and testable code, and debugging end-to-end issues across frontend, backend, and database layers. A fast learner who enjoys turning requirements into working, maintainable software and contributing productively within a collaborative engineering team.

EDUCATION

CECOS University of IT & Emerging Sciences **2022 – 2026**

B.S. in Software Engineering | Peshawar, Pakistan | CGPA: 3.17 / 4.00

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Operating Systems, Computer Networks, Software Engineering, Software Quality Assurance, Human-Computer Interaction, Artificial Intelligence

PROJECTS

Research Integrity Web Platform **Final Year Project**

Python, Flask, React, SQLite, REST APIs, Git

- Built a **full-stack web application** end to end, implementing a Flask backend, a React single-page frontend, and a normalized SQLite schema for users, uploaded documents, and generated analysis reports.
- Designed and documented **RESTful API endpoints** for document upload, processing status, and report retrieval, using JSON contracts and consistent HTTP status codes and error responses.
- Implemented server-side file handling and input validation for document uploads, including type and size checks, safe file naming, and structured error messages returned to the client.
- Structured the codebase into **modular, reusable components** (routing, services, data access) to separate concerns and keep the system maintainable and extensible.
- Integrated automated report generation and summarization features that transform processing output into structured, user-readable results in the UI.
- Applied **Git version control** with feature branches and incremental commits, and performed manual test-case based verification of core user flows before each milestone.

Darzify – Digital Tailor Shop POS System **Full-Stack Project**

TypeScript, React, Tailwind CSS, Express, IndexedDB (Dexie), jsPDF, PWA

- Built a **bilingual (Urdu/English) point-of-sale web application** for a tailor shop using React, TypeScript, and Tailwind CSS, covering booking, measurements, pricing, advance payment, and order-status tracking.
- Designed an **offline-first architecture** with an installable PWA and service worker, storing orders and customers locally in IndexedDB through Dexie so daily work continues without internet.
- Implemented **thermal receipt printing** by drawing Urdu tickets on a canvas and sending ESC/POS raster data over Web Bluetooth, Web Serial, and an Android Bluetooth bridge written in Java.
- Built an **Express REST API** protecting settings and order deletion with salted PBKDF2 PIN hashing and expiring session tokens, with JSON backup and restore of all shop data.
- Added **receipt tamper detection** using unique verification codes and SHA-256 fingerprints, plus PDF receipts shareable through WhatsApp.

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript, HTML5, CSS3

Backend & APIs: Flask, REST API design, JSON, server-side validation, authentication fundamentals, MVC architecture

Frontend: React, component-based UI, responsive layouts, DOM manipulation

Databases: MySQL, SQLite, schema design, normalization, joins, indexing, CRUD operations

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Time & Space Complexity, Operating Systems, Computer Networks

Software Engineering: SDLC, Agile/Scrum basics, requirement analysis, UML diagrams, design patterns, clean code, code review

Testing & QA: Unit testing, test case design, debugging, black-box & white-box testing, defect tracking

Tools & Workflow: Git, GitHub, VS Code, Postman, Linux/CLI, Jupyter Notebook

Additional: Machine Learning fundamentals (Scikit-learn, TensorFlow, Pandas, NumPy), Data Preprocessing, Prompt Engineering

CERTIFICATES

Cybersecurity for Citizens and Professionals **September 2026**

University of Padova, Arqus and CyberActioning | FutureLearn | Overall Score: 94%

Credential: futurelearn.com/certificates/5vt47nr

Cloud for CISOs **September 2026**

Amazon Web Services (AWS) | FutureLearn

Credential: futurelearn.com/certificates/ijlq672

STRENGTHS

Problem Solving & Analytical Thinking • Clear Technical Communication • Team Collaboration • Attention to Detail • Fast Self-Learner • Ownership & Follow-Through
